18. Practical Geometry (Constructions)

Exercise 18.1

1. Question

Construct a quadrilateral *ABCD* in which *AB* = 4.4 cm, *BC* = 4 cm, *CD* = 6.4 cm, *DA* = 3.8 cm and *BD* = 6.6 cm.

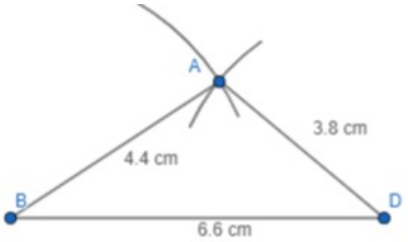
Answer

As four sides and diagonal of the quadrilateral is given.

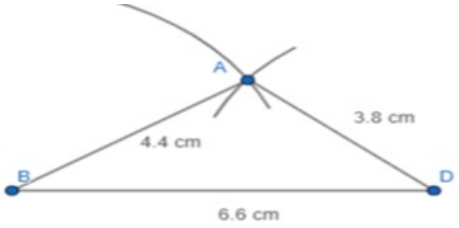
Step 1-Using SSS construction condition first we will draw ΔABD. Draw line BD of length 6.6 cm.

Step 2- Then using compass take a length of 4.4 cm and draw an arc by taking B as the centre. Do the same by taking D as centre and length of 3.8 cm.

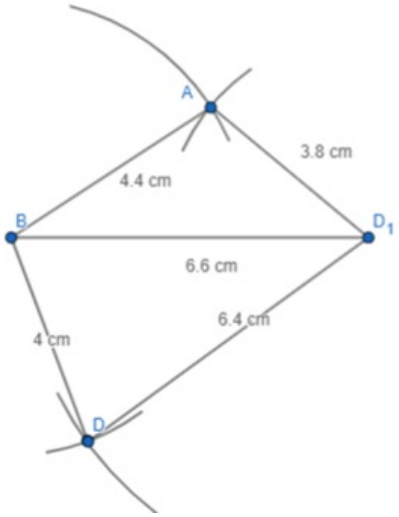
Step 3-Now join the intersection point to B and D and label it as A.



Step 4- Now for vertex C, using compass take a length of 4 cm and draw an arc by taking B as the centre. Do the same by taking D as centre and length of 6.4 cm.



Step 5-Join the intersection point to B and D and label it as C.



2. Question

Construct a quadrilateral *ABCD* in which *AB = BC* = 5.5 cm, *CD* = 4 cm, *DA* = 6.3 cm, *AC* = 9.4 cm Measure *BD*.

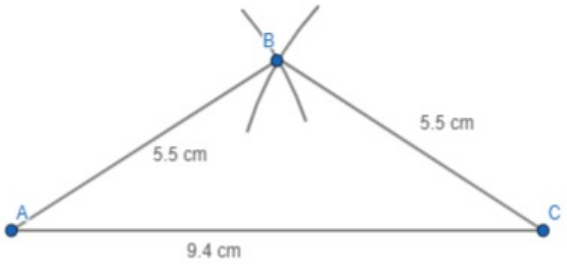
Answer

As four sides and diagonal of the quadrilateral is given.

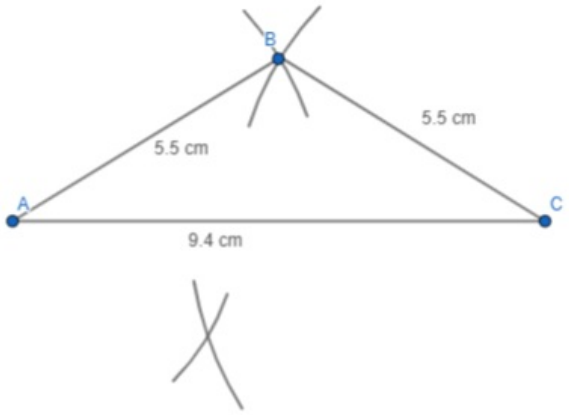
Step 1-Using SSS construction condition first we will draw ΔABC. Draw line AC of length 9.4 cm.

Step 2- Then using compass take a length of 5.5 cm and draw an arc by taking A as the centre. Do the same by taking C as centre and length of 5.5 cm.

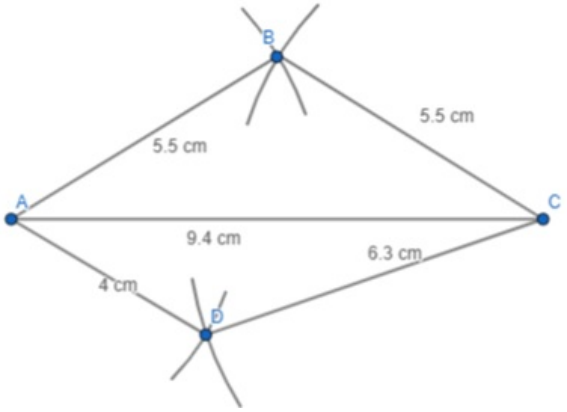
Step 3-Now join the intersection point to A and C and label it as B.



Step 4- Now for vertex B, using compass take a length of 4 cm and draw an arc by taking A as the centre. Do the same by taking C as the centre and length of 6.3cm.



Step 5-Join the intersection point to A and C and label it as D.



Join BD and measure length of BD.

BD = 5.1 cm

3. Question

Construct a quadrilateral *XYZW* in which *XY* = 5 cm, *YZ* = 6 cm, *ZW* = 7 cm, *WX* = 3 cm and *XZ* = 9 cm.

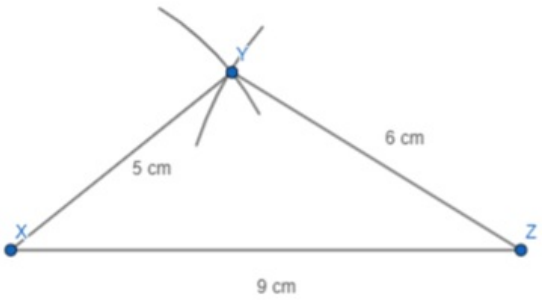
Answer

As four sides and diagonal of the quadrilateral is given.

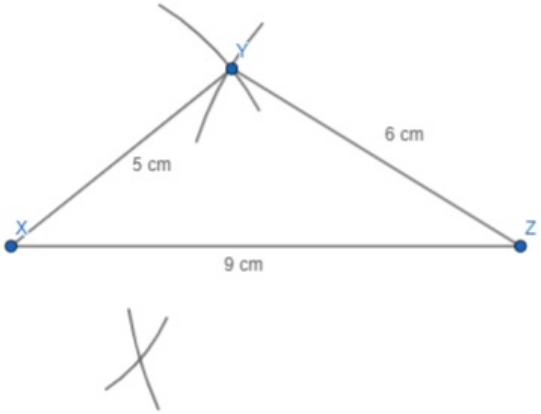
Step 1-Using SSS construction condition first we will construct ΔXYZ. Draw line XZ of length 9 cm.

Step 2- Then using compass take a length of 5 cm and draw an arc by taking X as the centre. Do the same by taking Z as centre and length of 6 cm.

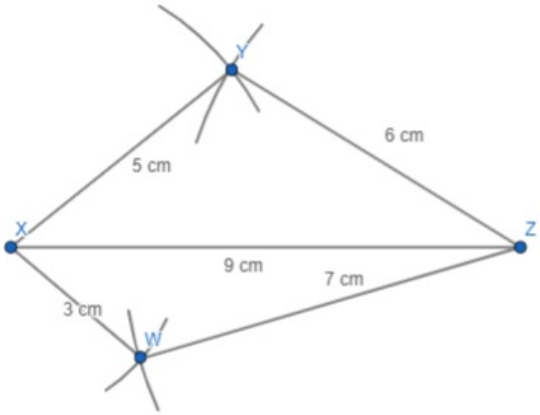
Step 3-Now join the intersection point to X and Z and label it as Y.



Step 4- For vertex W, using compass take a length of 3 cm and draw an arc by taking X as the centre. Similarly, taking Z as the centre and length of 7 cm.



Step 5-Join the intersection point to X and Z and label it as W.



4. Question

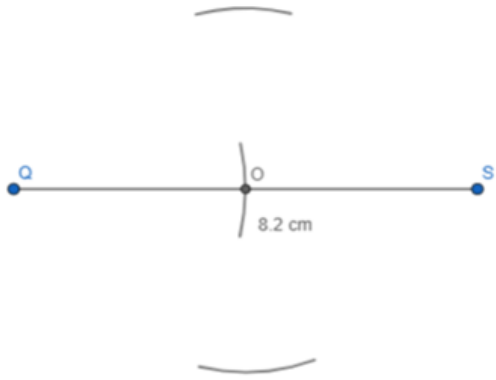
Construct a parallelogram *PQRS* such that *PQ* = 5.2 cm, *PR* = 6.8 cm, and *QS* = 8.2 cm.

Answer

As two diagonals and one side are given. Now for parallelogram opposite sides are equal.

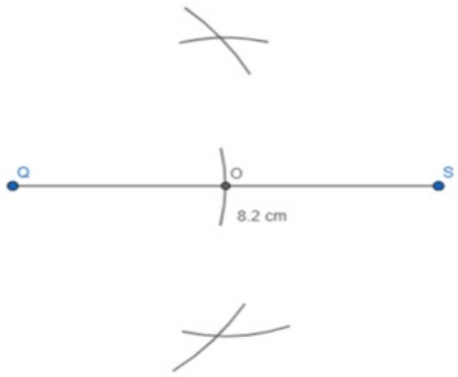
Step 1- Step 1-Using SSS construction condition first we will construct ΔPQS. Draw line QS of length 8.2 cm.

Step 2- Then using compass take a length of half of diagonal QS, 4.1 cm and draw an arc by taking Q as a centre and label it as O. Now the same by taking O as centre and length half of diagonal PR, 3.4 cm draw an arc on both the sides of QS.

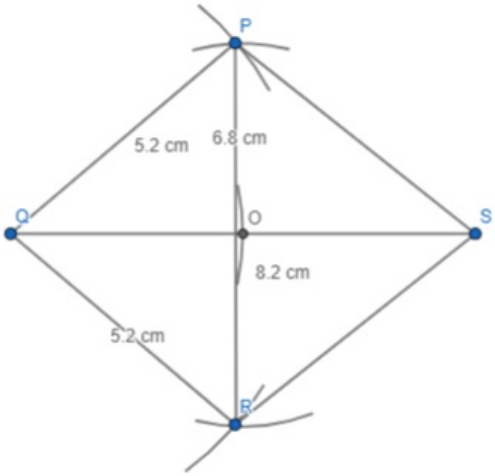


Step 3-Using compass take a length of 5.2 cm and draw an arc by taking Q as a centre on both the sides of

QS.



Step 4- Join sides PQ, PS, QR, RS.



5. Question

Construct a rhombus with side 6 cm and one diagonal 8 cm. Measure the other diagonal.

Answer

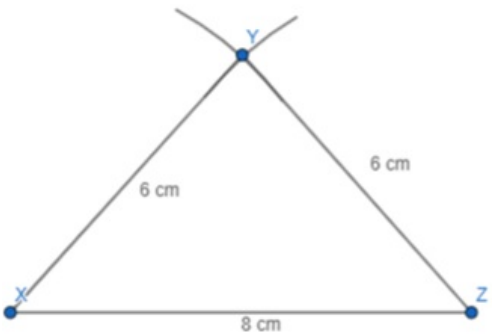
As all the sides of a rhombus are equal and diagonals bisect each other.

XY=YZ=ZW=WX=6 cm and XZ=8 cm

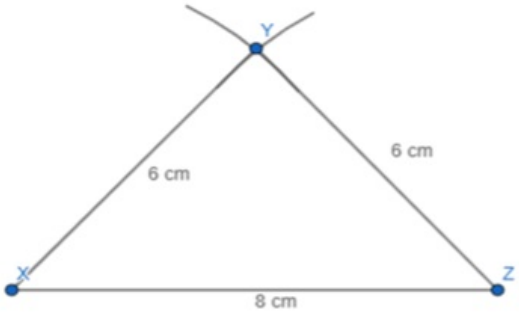
Step 1-Using SSS construction condition first we will construct ΔXYZ. Draw line XZ of length 8 cm.

Step 2- Then using compass take a length of 6 cm and draw an arc by taking X as the centre. Do the same by taking Z as centre and length of 6 cm.

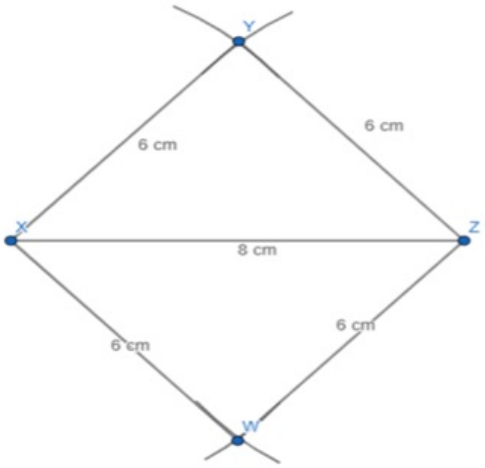
Step 3-Now join the intersection point to X and Z and label it as Y.



Step 4- Now for vertex W, using compass take a length of 6 cm and draw an arc by taking X as the centre. Do the same by taking Z as centre and length of 6 cm.



Step 5-Join the intersection point to X and Z and label it as W.



6. Question

Construct a kite *ABCD* in which *AB* = 4 cm, *BC* = 4.9 cm, *AC* = 7.2 cm.

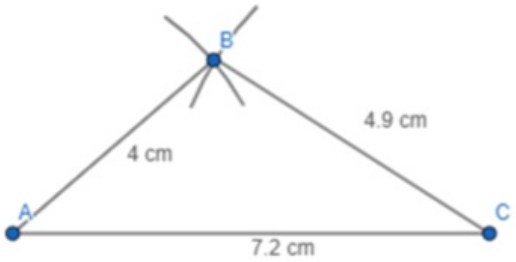
Answer

For a kite ABCD AB=AD and AC=BC.

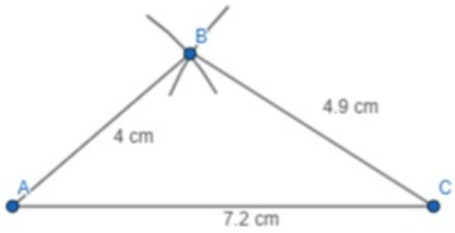
Step 1-Using SSS construction condition first we will construct ΔABC. Draw line AC of length 7.2 cm.

Step 2- Then using compass take a length of 4 cm and draw an arc by taking A as the centre. Do the same by taking C as centre and length of 4.9 cm.

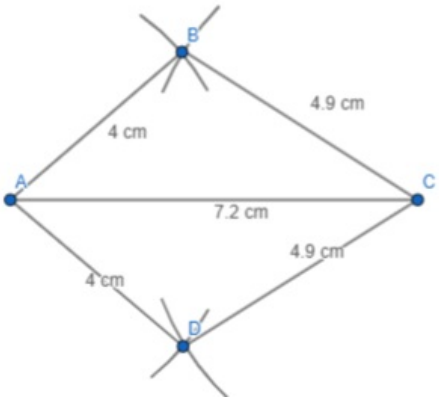
Step 3-Now join the intersection point to A and C and label it as B.



Step 4- Now for vertex D, using compass take a length of 4 cm and draw an arc by taking A as the centre. Do the same by taking C as centre and length of 4.9 cm.



Step 5-Join the intersection point to A and C and label it as D.



7. Question

Construct, if possible, a quadrilateral *ABCD* given $AB = 6$ cm, $BC = 3.7$ cm, $CD = 5.7$ cm, $AD = 5.5$ cm and $BD = 6.1$ cm. Give reasons for not being able to construct it, if you cannot.

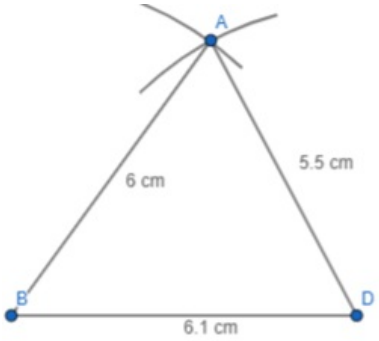
Answer

As four sides and diagonal of quadrilateral is given.

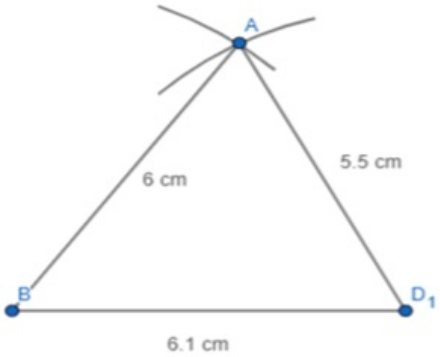
Step 1-Using SSS construction condition first we will draw ΔABD. Draw line BD of length 6.1 cm.

Step 2- Then using compass take a length of 6 cm and draw an arc by taking B as centre. Do the same by taking D as centre and length of 5.5 cm.

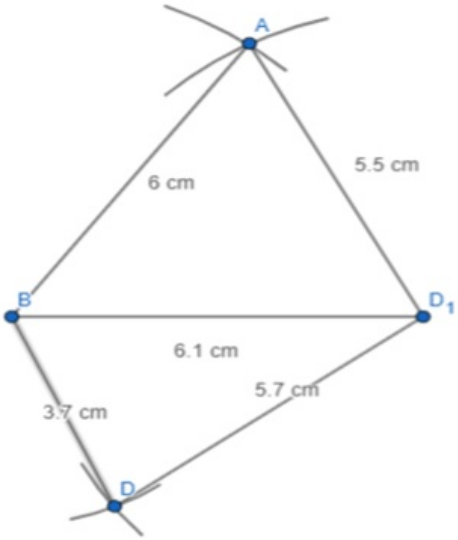
Step 3-Now join the intersection point to B and D and label it as A.



Step 4- Now for vertex C, using compass take a length of 3.7 cm and draw an arc by taking B as centre. Do the same by taking D as centre and length of 5.7 cm.



Step 5-Join the intersection point to B and D and label it as C.



8. Question

Construct, if possible, a quadrilateral *ABCD* in which *AB* = 6 cm, *BC* = 7 cm, *CD* = 3 cm, *AD* = 5.5 cm and *AC* = 11 cm. Give reasons for not being able to construct, if you cannot. (Not possible, because in triangle *ACD*, *AD* + *CD*<*AC*).

Answer

In a triangle, the sum of the length of its two sides must be greater than that of the third side.

In triangle ACD,

AD + CD = 5.5 + 3 = 8.5 cm

and AC = 11 cm

⇒ AD + CD < AC which is not possible.

So, the construction is not possible.

Exercise 18.2

1. Question

Construct a quadrilateral *ABCD* in which *AB* = 3.8 cm, *BC* = 3.0 cm, *AD* = 2.3 cm, *AC* = 4.5 cm and *BD* = 3.8 cm.

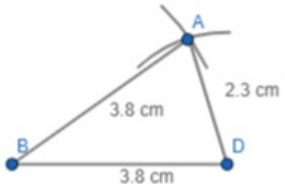
Answer

As three sides and two diagonals of quadrilateral is given.

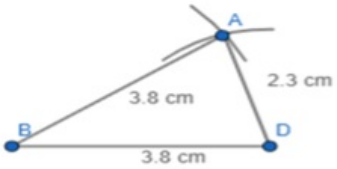
Step 1-Using SSS construction condition first we will draw ΔABD. Draw line BD of length 3.8 cm.

Step 2- Then using compass take a length of 3.8 cm and draw an arc by taking B as centre. Do the same by taking D as centre and length of 2.3 cm.

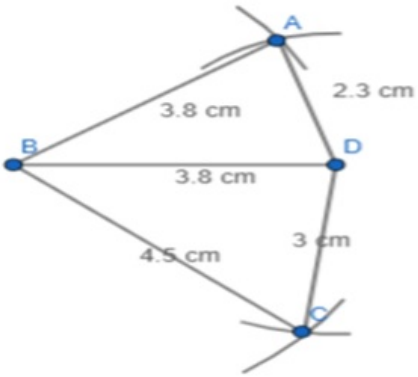
Step 3-Now join the intersection point to B and D and label it as A.



Step 4- Now for vertex C, using compass take a length of 4.5 cm and draw an arc by taking A as centre. Do the same by taking B as centre and length of 3 cm.



Step 5-Join the intersection point to B and D and label it as C.



2. Question

Construct a quadrilateral *ABCD* in which $BC = 7.5$ cm, $AC = AD = 6$ cm, $CD = 5$ cm and $BD = 10$ cm.

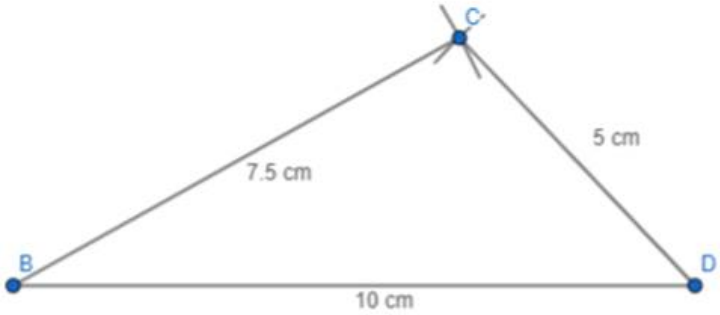
Answer

As three sides and two diagonals of quadrilateral is given.

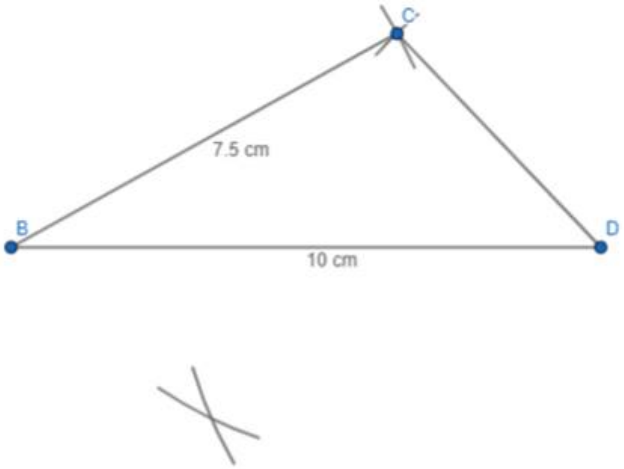
Step 1-Using SSS construction condition first we will draw ΔBCD. Draw line BD of length 10 cm.

Step 2- Then using compass take a length of 7.5 cm and draw an arc by taking B as centre. Do the same by taking D as centre and length of 5 cm.

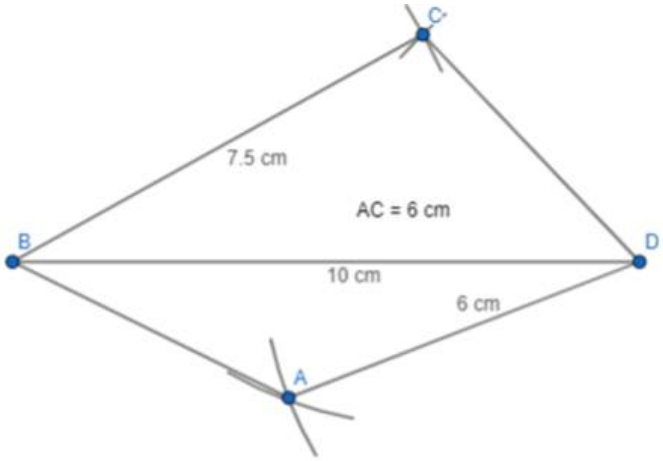
Step 3-Now join the intersection point to B and D and label it as C.



Step 4- Now for vertex A, using compass take a length of 6 cm and draw an arc by taking C as centre. Do the same by taking D as centre and length of 6 cm.



Step 5-Join the intersection point to B and D and label it as A.



3. Question

Construct a quadrilateral *ABCD* when *AB* = 3 cm, *CD* = 3 cm, *DA* = 7.5 cm, *AC* = 8 cm and *BD* = 4 cm.

Answer

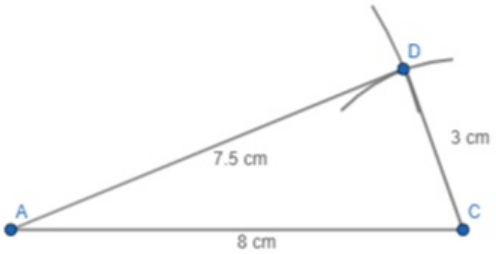
As three sides and two diagonals of quadrilateral is given.

Step 1-Using SSS construction condition first we will draw ΔACD. Draw line

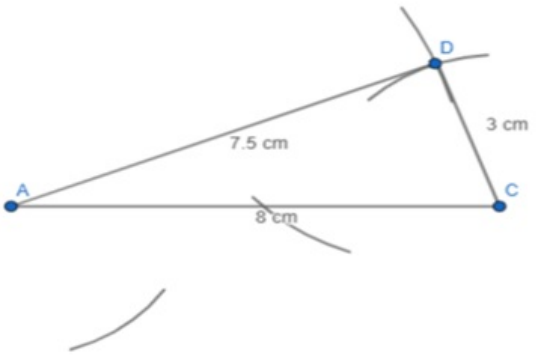
AC of length 8 cm.

Step 2- Then using compass take a length of 7.5 cm and draw an arc by taking A as centre. Do the same by taking C as centre and length of 3 cm.

Step 3-Now join the intersection point to A and C and label it as D.



Step 4- Now for vertex B, using compass take a length of 4 cm and draw an arc by taking D as centre. Do the same by taking A as centre and length of 3 cm.



Step 5-As arcs drawn are not intersecting it is not possible to construct quadrilateral ABCD (as in ΔABD, BD+AB< AD).

4. Question

Construct a quadrilateral *ABCD* given *AD* = 3.5 cm, *BC* = 2.5 cm, *CD* = 4.1 cm, *AC* = 7.3 cm and *BD* = 3.2 cm.

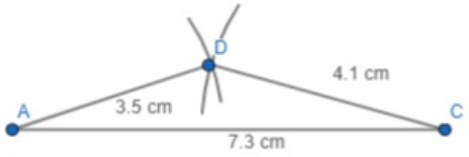
Answer

As three sides and two diagonals of quadrilateral is given.

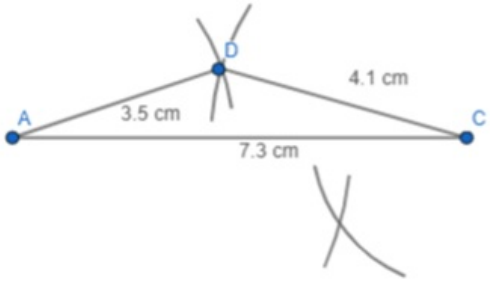
Step 1-Using SSS construction condition first we will draw ΔACD. Draw line AC of length 7.3 cm.

Step 2- Then using compass take a length of 3.5 cm and draw an arc by taking A as centre. Do the same by taking C as centre and length of 4.1 cm.

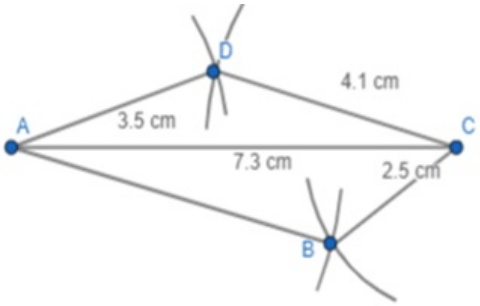
Step 3-Now join the intersection point to A and C and label it as D.



Step 4- Now for vertex B, using compass take a length of 3.2 cm and draw an arc by taking D as centre. Do the same by taking C as centre and length of 2.5 cm.



Step 5-Join the intersection point to A and C and label it as B.



5. Question

Construct a quadrilateral *ABCD* given *AD* = 5 cm, A*B* = 5.5 cm, *BC* = 2.5 cm, *AC* = 7.1 cm and *BD* = 8 cm.

Answer

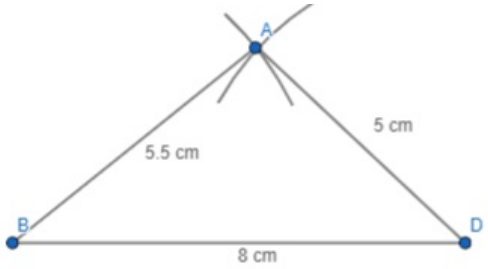
As three sides and two diagonals of quadrilateral is given.

Step 1-Using SSS construction condition first we will draw ΔABD. Draw line BD of length 8 cm.

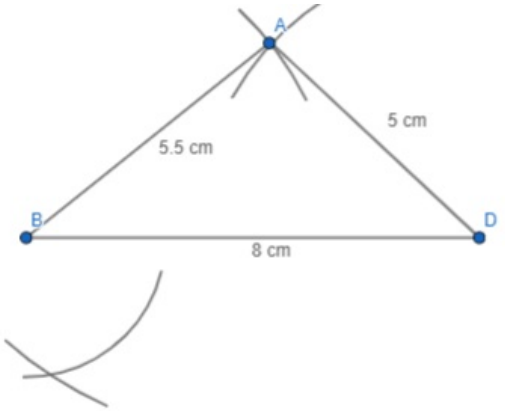
Step 2- Then using compass take a length of 5.5 cm and draw an arc by taking B as centre. Do the same by

taking D as centre and length of 5 cm.

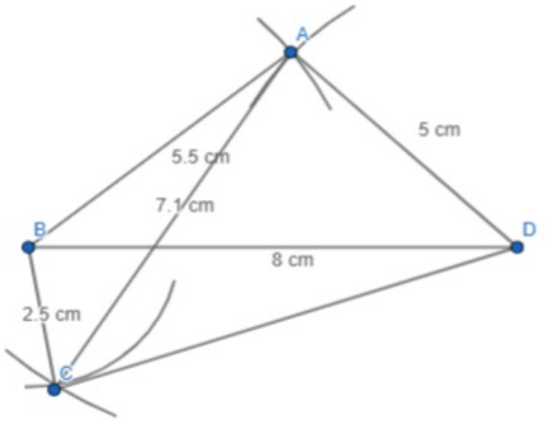
Step 3-Now join the intersection point to B and D and label it as A.



Step 4- Now for vertex D, using compass take a length of 7.1 cm and draw an arc by taking A as centre. Do the same by taking B as centre and length of 2.5 cm.



Step 5-Join the intersection point to A and C and label it as B.



6. Question

Construct a quadrilateral *ABCD* in which $BC = 4$ cm, $CA = 5.6$ cm, $AD = 4.5$ cm, $CD = 5$ cm and $BD = 6.5$ cm.

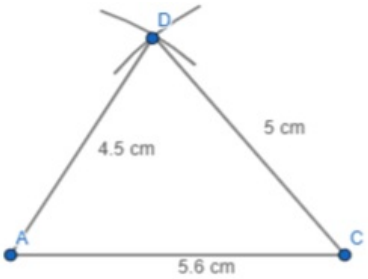
Answer

As three sides and two diagonals of quadrilateral is given.

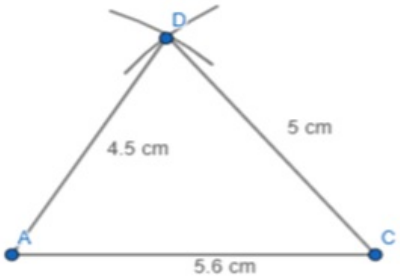
Step 1-Using SSS construction condition first we will draw ΔACD. Draw line CA of length 5.6 cm.

Step 2- Then using compass take a length of 4.5 cm and draw an arc by taking A as centre. Do the same by taking C as centre and length of 5 cm.

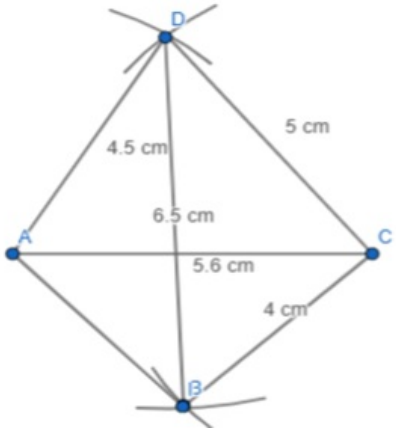
Step 3-Now join the intersection point to A and C and label it as D.



Step 4- Now for vertex B, using compass take a length of 6.5 cm and draw an arc by taking D as centre. Do the same by taking C as centre and length of 4 cm.



Step 5-Join the intersection point to A and C and label it as B.



Exercise 18.3

1. Question

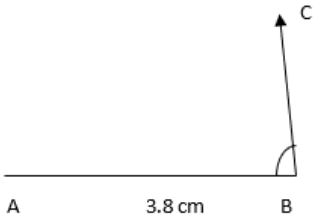
Construct a quadrilateral *ABCD* in which *AB* = 3.8 cm, *BC* = 3.4 cm, *CD* = 4.5 cm, *AD* = 5 cm and ∠*B* = 80°.

Answer

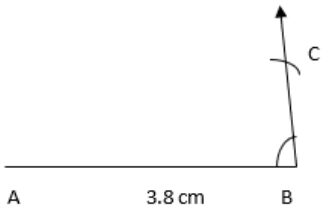
Steps of construction:

Step I: Draw AB = 3.8 cm.

Step II: Draw ∠ ABC = 80°.

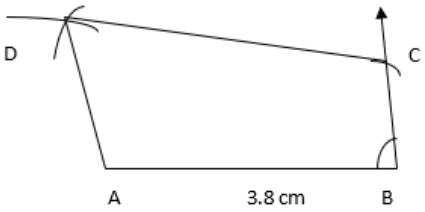


Step III: With B as the center and radius 3.4 cm, cut off BC = 3.4 cm.



Step IV: With C as the center and radius 4.5 cm, draw an arc.

Step V: With A as the center and radius 5 cm, draw an arc to intersect the arc drawn in Step IV at D.



Step VI: Join AD, BC and CD to obtain the required quadrilateral.

2. Question

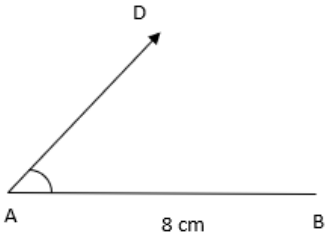
Construct a quadrilateral *ABCD* given that*AB* = 8 cm, *BC* = 8 cm, *CD* = 10 cm, *AD* = 10 cm and ∠*A* = 45°.

Answer

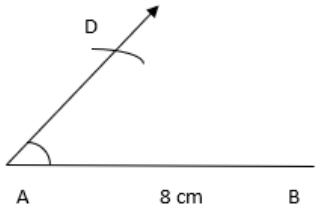
Steps of construction:

Step I: Draw AB = 8 cm.

Step II: Construct ∠ BAD = 45°.



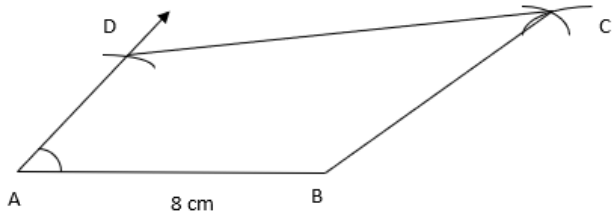
Step III: With A as the centre and radius 10 cm, cut off AD = 10 cm.



Step IV: With D as the centre and radius 10 cm, draw an arc.

Step V: With B as the centre and radius 8 cm, draw an arc to intersect the arc drawn in Step IV at C.

Step VI: Join BC and CD to obtain the required quadrilateral.



3. Question

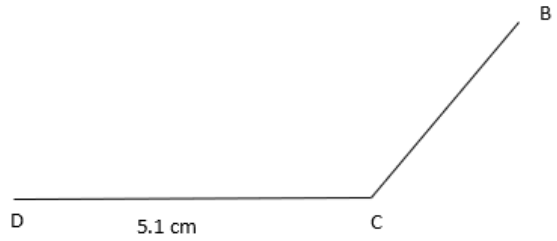
Construct a quadrilateral *ABCD* in which *AB* = 7.7 cm, *BC* = 6.8 cm, *CD* = 5.1 cm, *AS* = 3.6 cm and ∠*C* = 120°.

Answer

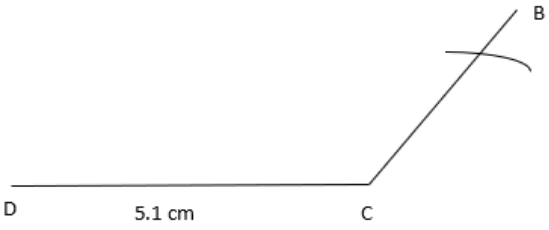
Steps of construction:

Step I: Draw DC = 5.1 cm.

Step II: Construct ∠ DCB = 120°.



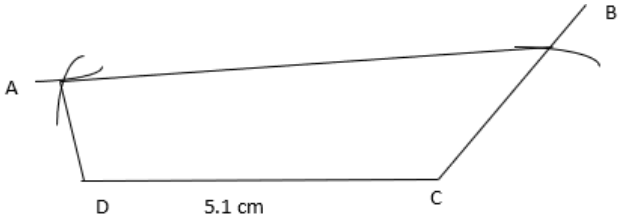
Step III: With C as the center and radius 6.8 cm, cut off BC = 6.8 cm.



Step IV: With B as the center and radius 7.7 cm, draw an arc.

Step V: With D as the center and radius 3.6 cm, draw an arc to intersect the arc drawn in Step IV at A.

Step VI: Join AB and AD to obtain the required quadrilateral.



4. Question

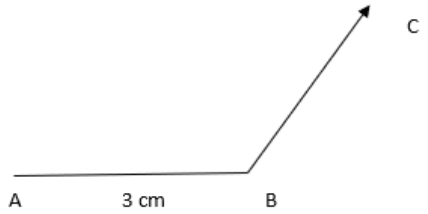
Construct a quadrilateral *ABCD* in which *AB* = *BC* = 3 cm, *AD* = *CD* = 5 cm and ∠*B* = 120°.

Answer

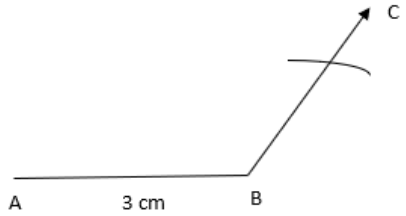
Steps of construction:

Step I: Draw AB = 3 cm.

Step II: Construct ∠ ABC = 120°.



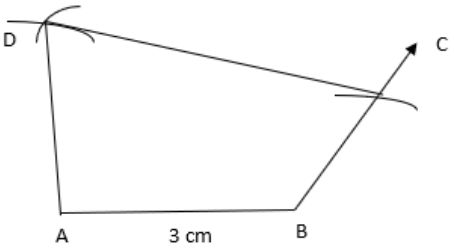
Step III: With B as the center and radius 3 cm, cut off BC = 3 cm.



Step IV: With C as the center and radius 5 cm, draw an arc.

Step V: With A as the center and radius 5 cm, draw an arc to intersect the arc drawn in Step IV at D.

Step VI: Join AD and CD to obtain the required quadrilateral.



5. Question

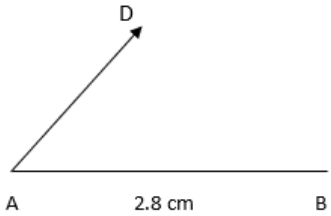
Construct a quadrilateral *ABCD* in which *AB* = 2.8 cm, *BC* = 3.1 cm, *CD* = 2.6 cm and *DA* = 3.3 cm and ∠*A* = 60°.

Answer

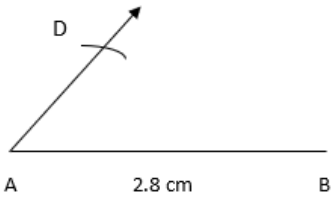
Steps of construction:

Step I: Draw AB = 2.8 cm.

Step II: Draw ∠ BAD = 60°.



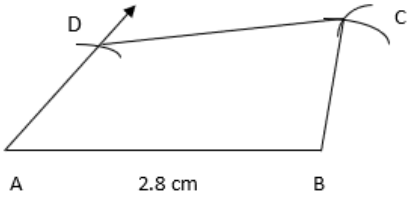
Step III: With A as the center and radius 3.3 cm, cut off AD = 3.3 cm.



Step IV: With D as the center and radius 2.6 cm, draw an arc.

Step V: With B as the center and radius 3.1 cm, draw an arc to intersect the arc drawn in Step IV at C.

Step VI: Join BC and CD to obtain the required quadrilateral.



6. Question

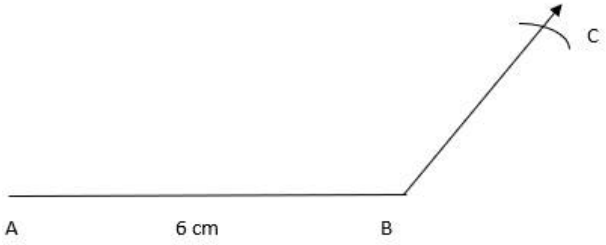
Construct a quadrilateral *ABCD* in which $AB = BC = 6$ cm, $AD = DC = 4.5$ cm and $\angle B = 120°$.

Answer

Steps of construction:

Step I: Draw AB = 6 cm.

Step II: Construct ∠ ABC = 120°.



Step III: With B as the centre and radius 6 cm, cut off BC = 6 cm. Now, we can see that AC is about 10.3 cm which is greater than AD + CD = 4.5 + 4.5 = 9 cm.

We know that sum of the lengths of two sides of the triangle is always greater than the third side but here, the sum of AD and CD is less than AC.

So, construction of the given quadrilateral is not possible.

Exercise 18.4

1. Question

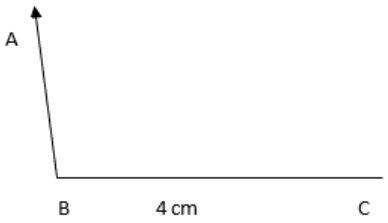
Construct a quadrilateral *ABCD* in which $AB = 6$ cm, $BC = 4$ cm, $CD = 4$ cm, $\angle B = 95°$ and $\angle C = 150°$.

Answer

Steps of construction:

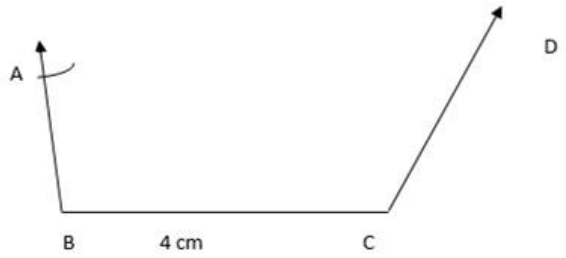
Step I: Draw BC = 4 cm.

Step II: Construct ∠ ABC = 95°.

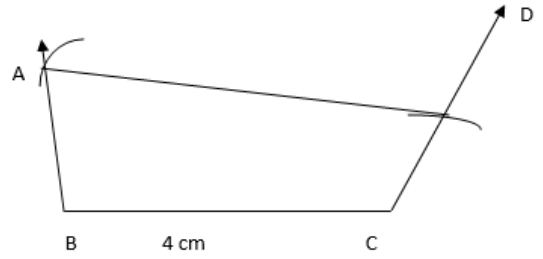


Step III: With B as the center and radius 6 cm, cut off BA = 6 cm.

Step IV: Construct ∠ BCD = 150° .



Step V: With C as the center and radius 4 cm, cut off CD = 4 cm.



Step VI: Join DA.

2. Question

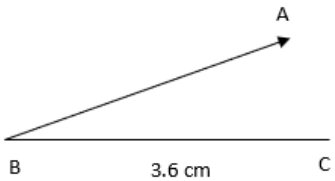
Construct a quadrilateral *ABCD* where *AB* = 4.2cm, *BC* = 3.6 cm, *CD* = 4.8 cm, ∠*B* = 30° and ∠*C* = 150°.

Answer

Steps of construction:

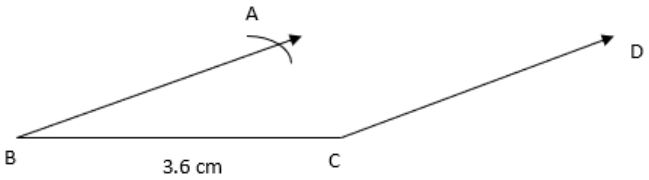
Step I: Draw BC = 3.6 cm.

Step II: Construct ∠ABC = 30°.



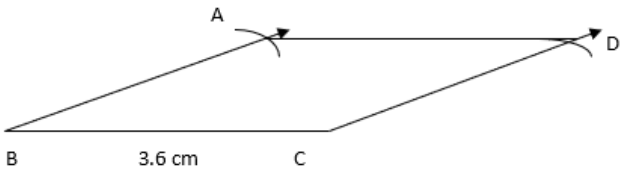
Step III: With B as the center and radius 4.2 cm, cut off BA = 4.2 cm.

Step IV: Construct ∠BCD = 150°.



Step V: With C as the center and radius 4.8 cm, cut off CD = 4.8 cm.

Step VI: Join AD.



The quadrilateral so obtained is the required quadrilateral.

3. Question

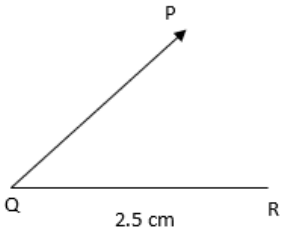
Construct a quadrilateral *PQRS* in which $PQ = 3.5$ cm, $QR = 2.5$ cm, $RS = 4.1$ cm, $\angle Q = 75°$ and $\angle R = 120°$.

Answer

Steps of construction:

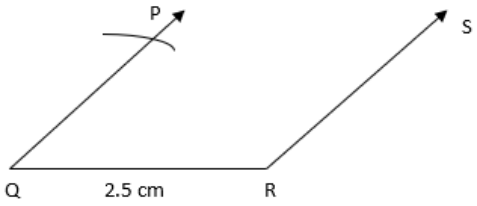
Step I: Draw QR = 2.5 cm.

Step II: Construct ∠PQR = 75°.



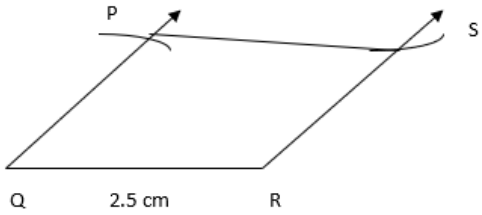
Step III: With Q as the center and radius 3.5 cm, cut off QP = 3.5 cm.

Step IV: Construct ∠QRS = 120.



Step V: With R as the center and radius 4.1 cm, cut off RS = 4.1 cm.

Step VI: Join PS.



4. Question

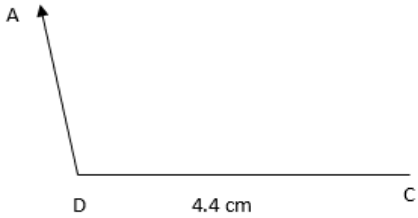
Construct a quadrilateral *ABCD* given *BC* = 6.6 cm, *CD* = 4.4 cm, *AD* = 5.6 cm ∠*D* = 100° and ∠*C* = 95°.

Answer

Steps of construction:

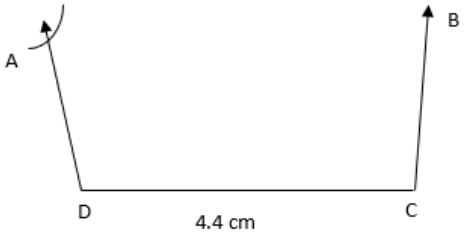
Step I: Draw DC = 4.4 cm.

Step II: Construct ∠ADC = 100°.



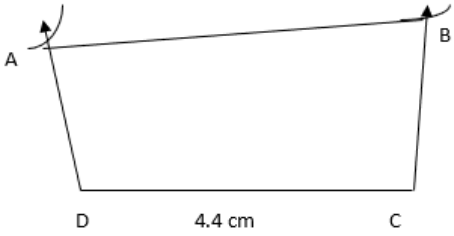
Step III: With D as the center and radius 5.6 cm, cut off DA = 5.6 cm.

Step IV: Construct ∠BCD = 95°.



Step V: With C as the center and radius 6.6 cm, cut off CB = 6.6 cm.

Step VI: Join AB.



5. Question

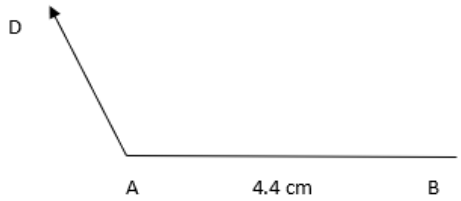
Construct a quadrilateral *ABCD* in which *AD* = 3.5 cm, *AB* = 4.4 cm, *BC* = 4.7 cm, ∠*A* = 125° and ∠*B* = 120°.

Answer

Steps of construction:

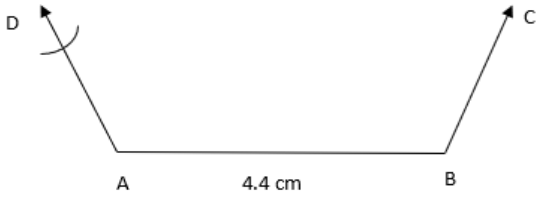
Step I: Draw AB = 4.4 cm.

Step II: Construct ∠BAD = 125°.



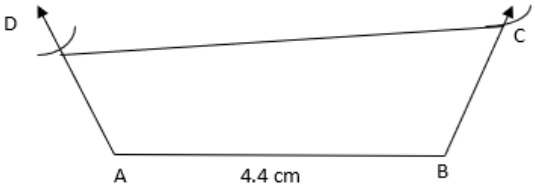
Step III: With A as the centre and radius 3.5 cm, cut off AD = 3.5 cm.

Step IV: Construct ∠ABC = 125°.



Step V: With B as the centre and radius 4.7 cm, cut off BC = 4.7 cm.

Step VI: Join CD.



6. Question

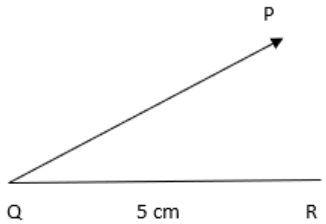
Construct a quadrilateral *PQRS* in which ∠*Q* = 45° and ∠*R* = 90°, *QR* = 5 cm, *PQ* = 9 cm and *RS* = 7 cm.

Answer

Steps of construction:

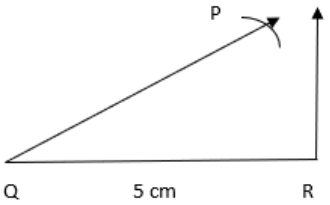
Step I: Draw QR = 5 cm.

Step II: Construct ∠PQR = 45°.



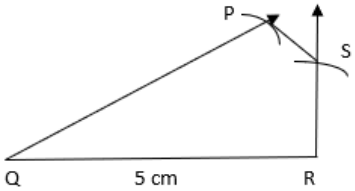
Step III: With Q as the center and radius 9 cm, cut off QP = 9 cm.

Step IV: Construct ∠QRS = 90°.



Step V: With R as the center and radius 7 cm, cut off RS = 7 cm.

Step VI: Join PS.



7. Question

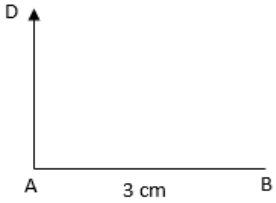
Construct a quadrilateral *ABCD* in which *AB* = *BC* = 3 cm, *AD* = 5 cm, ∠*A* = 90° and ∠*B* = 105°.

Answer

Steps of construction:

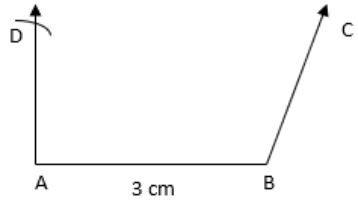
Step I: Draw AB = 3 cm.

Step II: Construct ∠DAB = 90°.



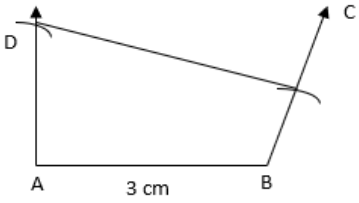
Step III: With A as the center and radius 5 cm, cut off AD = 5 cm.

Step IV: Construct ∠ABC = 105°.



Step V: With B as the center and radius 3 cm, cut off BC = 3 cm.

Step VI: Join CD.



8. Question

Construct a quadrilateral *BDEF,* where $DE = 4.5$ cm, $EF = 3.5$ cm, $FB = 6.5$ cm, $\angle F = 50°$ and $\angle E = 100°$.

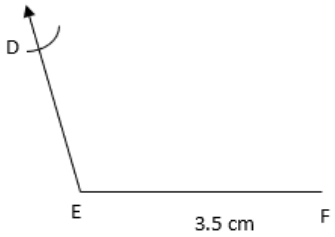
Answer

Steps of construction:

Step I: Draw EF = 3.5 cm.

Step II: Construct ∠DEF = 100°.

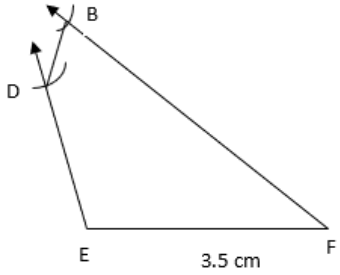
Step III: With E as the center and radius 4.5 cm, cut off DE = 4.5 cm.



Step IV: Construct ∠EFB = 50°.

Step V: With F as the center and radius 6.5 cm, cut off FB = 6.5 cm.

Step VI: Join BD.



Exercise 18.5

1. Question

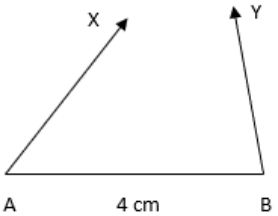
Construct a quadrilateral *ABCD* given that $AB = 4$ cm, $BC = 3$ cm, $\angle A = 75°$, $\angle B = 80°$ and $\angle C = 120°$.

Answer

Steps of construction:

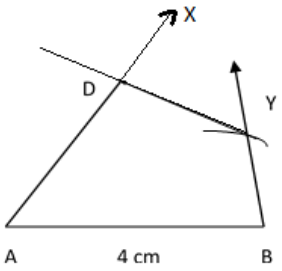
Step I: Draw AB = 4 cm.

Step II: Construct ∠XAB = 75° at A and ∠ABY = 80° at B.



Step III: With B as the center and radius 3 cm, cut off BC = 3 cm.

Step IV: At C, draw ∠BCD = 120° such that it meets AX at D.



2. Question

Construct a quadrilateral *ABCD* where *AB* = 5.5 cm, *BC* = 3.7 cm, ∠*A* = 60°, ∠*B* = 105° and ∠*D* = 90°.

Answer

We know that the sum of all the angles in a quadrilateral is 360.

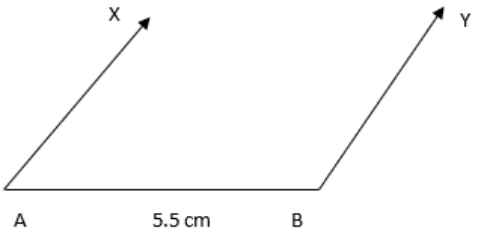
i.e. ∠A+∠B+∠C+∠D = 360°

∠C = 105°

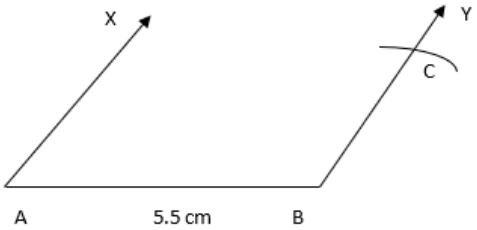
Steps of construction:

Step I: Draw AB = 5.5 cm.

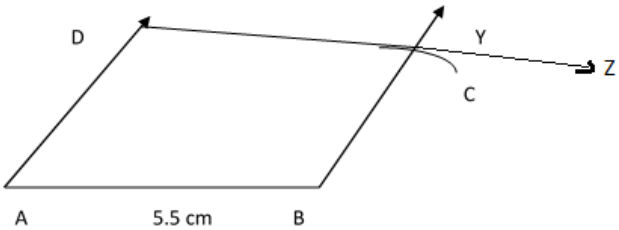
Step II: Construct ∠XAB = 60° at A and ∠ABY = 105°.



Step III: With B as the center and radius 3.7 cm, cut off BC = 3.7 cm.



Step IV: At C, draw ∠BCZ = 105° such that it meets AX at D.



3. Question

Construct a quadrilateral *PQRS* where *PQ* = 3.5 cm, *QR* = 6.5 cm, ∠*P* = ∠*R* = 105° and ∠*S* = 75°.

Answer

We know that the sum of all the angles in a quadrilateral is 360.

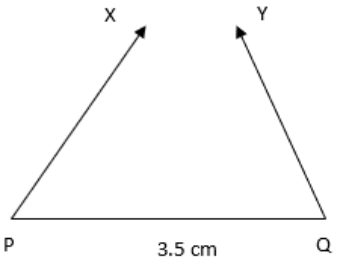
i.e., ∠P+∠Q+∠R+∠S = 360°

∠ Q = 75°

Steps of construction:

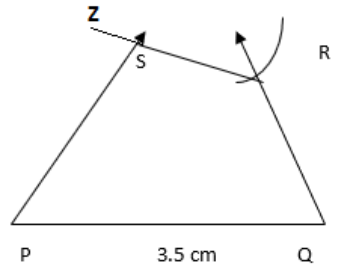
Step I: Draw PQ = 3.5 cm.

Step II: Construct ∠XPQ = 75° and ∠PQY = 75°.



Step III: With Q as the center and radius 6.5 cm, cut off QR = 6.5

Step IV: At R, draw ∠QRZ = 105° such that it meets PX at S.



4. Question

Construct a quadrilateral *ABCD* when *BC* = 5.5 cm, *CD* = 4.1 cm, ∠*A* = 70°, ∠*B* = 110° and ∠*D* = 85°.

Answer

We know that the sum of all the angles in a quadrilateral is 360.

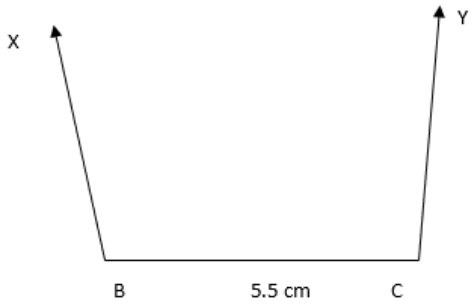
i.e. ∠A+∠B+∠C+∠D = 360°

∠C = 95°

Steps of construction:

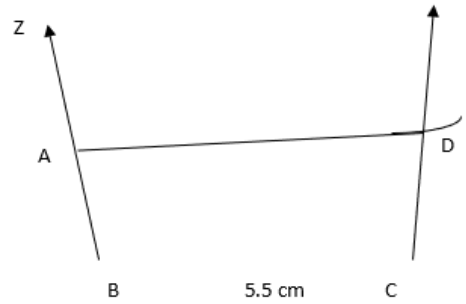
Step I: Draw BC = 5.5 cm.

Step II: Construct ∠XBC = 110° at A and ∠BCY = 95°.



Step III: With C as the center and radius 4.1 cm, cut off CD = 4.1 cm.

Step IV: At D, draw ∠CDZ = 85° such that it meets BY at A.



5. Question

Construct a quadrilateral *ABCD* ∠*A* = 65°, ∠*B* = 105°, ∠*C* = 75°, *BC* = 5.7 cm and *CD* = 6.8 cm.

Answer

We know that the sum of all the angles in a quadrilateral is 360

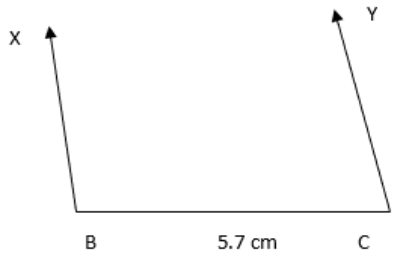
i.e. ∠A+∠B+∠C+∠D = 360°

∠D = 115°

Steps of Construction:

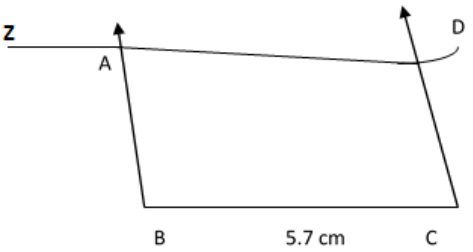
Step I: Draw BC = 5.7 cm.

Step II: Construct ∠XBC = 105° and ∠BCY = 75.



Step III: With C as the center and radius 6.8 cm, cut off CD = 6.8 cm.

Step IV: At D, draw ∠CDZ = 115° such that it meets BY at A.



6. Question

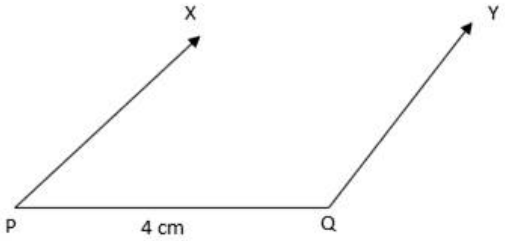
Construct a quadrilateral *PQRS* in which *PQ* = 4 cm, *QR* = 5 cm ∠*P* = 50°, ∠*Q* = 110° and ∠*R* = 70°.

Answer

Steps of construction:

Step I: Draw PQ = 4 cm.

Step II: Construct ∠XPQ = 50° and ∠PQY = 110°.



Step III: With Q as the center and radius 5 cm, cut off QR = 5 cm.

Step IV: At R, draw ∠QRZ = 70° such that it meets PX at S.
